

**THIRD TERM**  
**WEEKLY LESSON NOTES**  
**WEEK 10**

<b>Week Ending:</b> 01-09-2023	<b>DAY:</b>	<b>Subject:</b> Science
<b>Duration:</b> 100mins		<b>Strand:</b> Humans & The Environment
<b>Class:</b> B8	<b>Class Size:</b>	<b>Sub Strand:</b> Properties Of Soils
<b>Content Standard:</b> B8.5.5.1 Demonstrate understanding of the differences among soils, plant roots, stems, leaves, flowers, and fruits of plants in the different environments.		<b>Indicator:</b> B8.5.5.1.1 Discuss physical properties of soils.
		<b>Lesson:</b> 1 of 2
<b>Performance Indicator:</b> Learners can discuss physical properties of soils.		<b>Core Competencies:</b> DL 5.3: CI 6.8: DL 5.1: CI 6.6:
<b>References:</b> Science Curriculum Pg. 80		
<b>Phase/Duration</b>	<b>Learners Activities</b>	<b>Resources</b>
<b>PHASE 1: STARTER</b>	<p>Revise with learners to review their understanding in the previous lesson.</p> <p>Share performance indicators with learners.</p>	
<b>PHASE 2: NEW LEARNING</b>	<p>Discuss with learners on the different soil types: sandy, loamy, and clay soils. Explain their characteristics, particle sizes, and how they differ in terms of water retention and drainage.</p> <p>Discuss how each soil type supports the root system of plants and how water retention affects plant growth.</p> <p>Divide the class into groups and provide each group with garden trowels or small shovels.</p> <p>Take a field trip to the school garden or a designated area in the community to collect soil samples. Instruct learners to collect samples of sandy, loamy, and clay soils separately.</p> <p>Distribute clear plastic cups, seeds, markers, and handouts with observation sheets.</p> <p>Instruct each group to fill three cups with equal amounts of each soil type. Label the cups accordingly.</p> <p>Have learners plant a seed in each cup and water them with the same amount of water using a graduated cylinder.</p> <p>Ask learners to record their initial observations on the handout, noting the appearance of each soil type and the water added.</p> <p>Place the cups near a window or under a grow light and let the seeds germinate over the next few days.</p>	Pictures and charts

	<p>Bring the cups back to the classroom. Have learners measure the height of the seedlings in each cup using a ruler. Discuss and record the findings on the whiteboard.</p> <p>Lead a discussion based on the observation results:</p> <ul style="list-style-type: none"> <li>- How did each soil type retain water differently?</li> <li>- How did water retention affect the growth of the seedlings?</li> <li>- Which soil type seemed to support the root system the best?</li> </ul> <p><u>Assessment</u></p> <p>Ask learners to research and write a short essay on the benefits and challenges of each soil type for specific types of crops or plants.</p>	
<p><b>PHASE 3:</b> <b>REFLECTION</b></p>	<p>Use peer discussion and effective questioning to find out from learners what they have learnt during the lesson.</p> <p>Take feedback from learners and summarize the lesson.</p>	

<b>Week Ending:</b> 01-09-2023	<b>DAY:</b>	<b>Subject:</b> Science
<b>Duration:</b> 100mins		<b>Strand:</b> Humans & The Environment
<b>Class:</b> B8	<b>Class Size:</b>	<b>Sub Strand:</b> Properties Of Soils
<b>Content Standard:</b> B8.5.5.1 Demonstrate understanding of the differences among soils, plant roots, stems, leaves, flowers, and fruits of plants in the different environments	<b>Indicator:</b> B8.5.5.1.2 Analyze the physical properties of soils and soil water content and demonstrate their importance in crop production.	<b>Lesson:</b> 1 of 2
<b>Performance Indicator:</b> Learners can discuss physical properties of soils.		<b>Core Competencies:</b> DL 5.3: CI 6.8: DL 5.1: CI 6.6:
<b>References:</b> Science Curriculum Pg. 80		

Phase/Duration	Learners Activities	Resources
<b>PHASE 1: STARTER</b>	<p>Revise with learners to review their understanding in the previous lesson.</p> <p>Share performance indicators with learners.</p>	
<b>PHASE 2: NEW LEARNING</b>	<p>Display samples of each soil type and discuss their physical properties:</p> <ul style="list-style-type: none"> <li>• Sandy: coarse texture, large particle size, good drainage but low nutrient content.</li> <li>• Loamy: balanced texture, medium particle size, and moderate water retention, rich in nutrients.</li> <li>• Clay: fine texture, small particle size, high water retention but can become compacted.</li> </ul> <p>Allow learners to touch and feel the texture of each soil type. Present the potted plants grown in different soils to the learners.</p> <p>Ask learners to observe and describe the growth of the plants in each pot – height, leaf size, overall health, etc.</p> <p>Discuss how the physical properties of the soil could influence these observations.</p> <p>Discuss the concept of osmosis and explain how plants absorb water and nutrients from the soil.</p> <ul style="list-style-type: none"> <li>• Fill two cups with water and add a few drops of food coloring to each cup, making the water visibly colored.</li> <li>• Place celery stalks (or alternative plant) in each cup, ensuring the leaves are still exposed.</li> <li>• Over time (this may extend beyond the duration of the lesson), the colored water will travel up the celery stalk, demonstrating osmosis.</li> <li>• If available, use a microscope to show a close-up of the plant cells absorbing water (this will be more visible in the case of translucent leaves or thin plant tissues).</li> </ul>	Pictures and charts

	<p>Engage learners in a discussion about their observations:</p> <p>Which soil type seemed best for plant growth? Why?</p> <ul style="list-style-type: none"> <li>• How do the physical properties of soil impact water retention and nutrient availability?</li> <li>• How does osmosis help plants absorb the necessary water and nutrients?</li> </ul> <p><u>Project work</u></p> <p>Ask learners to experiment at home by placing a plant in a cup of colored water and observing any changes in the plant over a week. They should document their observations and write a short report on their findings.</p>	
<p>PHASE 3: <b>REFLECTION</b></p>	<p>Use peer discussion and effective questioning to find out from learners what they have learnt during the lesson.</p> <p>Take feedback from learners and summarize the lesson.</p>
