

# FIRST TERM

## WEEKLY LESSON NOTES

### WEEK 7

<b>Week Ending:</b> 17-11-2023	<b>DAY:</b>	<b>Subject:</b> Mathematics
<b>Duration:</b> 100MINS		<b>Strand:</b> Number
<b>Class:</b> B9	<b>Class Size:</b>	<b>Sub Strand:</b> SURDS
<b>Content Standard:</b> B9.1.2.4 Demonstrate understanding of surds as real numbers, the process of adding and subtracting of surds		<b>Indicator:</b> B9.1.2.4.3 Simplify given surds
		<b>Lesson:</b> 1 of 2
<b>Performance Indicator:</b> Learners can simplify surds and provide practice opportunities for simplifying various surd expressions.		<b>Core Competencies:</b> Communication and Collaboration (CC) Critical Thinking and Problem solving (CP)
<b>References:</b> Mathematics Curriculum Pg. 170		
<b>New words:</b> Surds, Simple Surd, Compound, Radicand		
<b>Phase/Duration</b>	<b>Learners Activities</b>	<b>Resources</b>
<b>PHASE 1: STARTER</b>	<p>Begin with a visual starter. Display the following surds on the board: <math>\sqrt{12}</math>, <math>\sqrt{27}</math>, <math>\sqrt{18}</math>, <math>\sqrt{20}</math>.</p> <p>Ask learners to identify any patterns or similarities they notice in these surds.</p> <p>Share performance indicators and introduce the lesson.</p>	
<b>PHASE 2: NEW LEARNING</b>	<p>Begin by simplifying surds with perfect square factors. Explain that if a radicand contains a perfect square factor, it can be simplified.</p> <p>Provide examples and demonstrate the process:  <math>\sqrt{12} = \sqrt{(4 * 3)} = 2\sqrt{3}</math>  <math>\sqrt{27} = \sqrt{(9 * 3)} = 3\sqrt{3}</math></p> <p>Move on to more complex surds that require factoring and simplification.</p> <p>Provide examples of surds like <math>\sqrt{18}</math> and <math>\sqrt{20}</math> and guide learners through the simplification process:  <math>\sqrt{18} = \sqrt{(9 * 2)} = 3\sqrt{2}</math>  <math>\sqrt{20} = \sqrt{(4 * 5)} = 2\sqrt{5}</math></p> <p>Distribute a set of surd expressions to learners, including both simple and complex surds.</p> <p>Encourage learners to work individually or in pairs to simplify these surds.</p> <p>Provide opportunities for peer teaching and collaborative problem-solving.</p>	Number cards

	<u>Assessment</u> <ol style="list-style-type: none"><li>1. Simplify <math>\sqrt{48}</math>.</li><li>2. What is the simplified form of <math>\sqrt{75}</math>?</li><li>3. If <math>\sqrt{45} = a\sqrt{5}</math>, find the value of 'a.'</li><li>4. Simplify the surd <math>\sqrt{98}</math>.</li></ol>	
<b>PHASE 3: REFLECTION</b>	Use peer discussion and effective questioning to find out from learners what they have learnt during the lesson.  Take feedback from learners and summarize the lesson.	

<b>Week Ending:</b> 17-11-2023	<b>DAY:</b>	<b>Subject:</b> Mathematics	
<b>Duration:</b> 100MINS		<b>Strand:</b> Number	
<b>Class:</b> B9	<b>Class Size:</b>	<b>Sub Strand:</b> SURDS	
<b>Content Standard:</b> B9.1.2.4 Demonstrate understanding of surds as real numbers, the process of adding and subtracting of surds		<b>Indicator:</b> B9.1.2.4.4 Approximate the square roots of non-perfect squares with calculators/tables	<b>Lesson:</b> 1 of 2
<b>Performance Indicator:</b> Learners can approximate the square roots of non-perfect square numbers using calculators or reference tables.		<b>Core Competencies:</b> Communication and Collaboration (CC) Critical Thinking and Problem solving (CP)	
<b>References:</b> Mathematics Curriculum Pg. 171			
<b>New words:</b> Surds, Simple Surd, Approximate, Radicand			
<b>Phase/Duration</b>	<b>Learners Activities</b>	<b>Resources</b>	
<b>PHASE 1: STARTER</b>	<p>Begin with a math challenge. Write the following non-perfect square numbers on the board: 10, 15, 20, 25, 30.</p> <p>Ask learners to estimate the square roots of these numbers without using calculators. Discuss their estimates and methods.</p> <p>Share performance indicators and introduce the lesson.</p>		
<b>PHASE 2: NEW LEARNING</b>	<p>Begin by reviewing what square roots are and how they are related to squaring a number.</p> <p>Explain that not all numbers have whole number square roots, and we need to approximate the square roots of non-perfect squares.</p> <p>Introduce the use of calculators for approximating square roots. Explain the square root function (<math>\sqrt{x}</math>) on calculators and how to use it.</p> <p>Provide examples of non-perfect squares, and demonstrate how to use calculators to find their approximate square roots:  <math>\sqrt{10} \approx 3.16</math>  <math>\sqrt{15} \approx 3.87</math>  <math>\sqrt{20} \approx 4.47</math></p> <p>Explain the concept of reference tables, which are pre-calculated values of square roots for common numbers.</p> <p>Provide learners with a reference table for square roots of non-perfect squares.</p> <p>Have learners use the table to find the approximate square roots of numbers.</p>	Number cards	

	<p>Provide learners with a list of non-perfect square numbers and ask them to approximate the square roots using calculators and reference tables.</p> <p>Encourage peer discussion and sharing of methods for accurate approximation.</p> <p><u>Assessment</u></p> <ol style="list-style-type: none"> <li>1. Approximate the square root of 17 using a calculator.</li> <li>2. Use the reference table to find the approximate square root of 28.</li> <li>3. Estimate the square root of 40 without a calculator and then check your estimate using a calculator.</li> </ol>	
<p><b>PHASE 3: REFLECTION</b></p>	<p>Use peer discussion and effective questioning to find out from learners what they have learnt during the lesson.</p> <p>Take feedback from learners and summarize the lesson.</p>
